

Please reject the NAB's petition 04-160. XM Radio is an excellent source of information for weather and traffic locally. We pay for this service. As a matter of point, I still listen to my local AM station (WTOP 1500) as an additional source. The fact of the matter though, is the traffic reporting on XM is significantly better than WTOP in terms of depth, area of coverage and accuracy.

I also want to tell you that I am totally against what the FCC is doing against Howard Stern. It is flat out wrong. He is one of the most interesting personalities on radio. I bet the average per capita income of those who listen are in the top 5% nationally. We just don't have the time to voice our opinion because we are too busy with work, family and recreation to waste our time like those who voice their opinion against Howard Stern.

Thank you.
